Career Profile

Results-driven Data Analyst with a Master of Data Science (Charles Darwin University) and hands-on experience spanning end-to-end data pipelines, business intelligence reporting, and cross-functional stakeholder engagement. Proven track record of transforming complex, multi-source datasets into actionable insights that drive strategic decisions and measurable business outcomes. Proficient in SQL, Python, Power BI, and Tableau, with strong competencies in requirements gathering, KPI definition, root-cause analysis, and data-driven process optimisation. Adept at translating technical findings into clear executive narratives and working collaboratively within Agile delivery environments.

Technical Skills

Programming Language: Python, C, Java, SQL, R

Systems and Tools: Tableau, Power BI, Excel, Postman, JIRA, Microsoft 365, GitHub

Analytics Techniques: Regressing modelling, trend & cohort analysis, A/B testing, ETL pipeline design

Core Skills

- Data Analysis and Data Modelling
- Business Intelligence and Reporting
- Power BI and Tableau Dashboard Development
- Agile/Scrum Delivery Frameworks
- Root Cause Analysis and Problem Solving
- Stakeholder Communication and Requirements Gathering
- KPI Design and Performance Monitoring
- API Testing and System Integration Validation
- SQL Querying and Data Validation
- Process Mapping and Workflow Optimisation

Professional Experiences

Data Analyst | Blueroad Experience | March'25 – August'25

- Designed and maintained end-to-end ETL workflows to extract, cleanse, and integrate transactional data from multiple booking platforms, ensuring consistent data quality for downstream analytics and business reporting.
- Performed in-depth exploratory and statistical analysis (trend analysis, cohort segmentation, and seasonality modelling) to uncover booking patterns, customer lifetime value drivers, and revenue optimisation opportunities.
- Developed and published interactive Power BI dashboards and standardised management reports, enabling senior stakeholders to monitor real-time KPIs and make evidence-based operational decisions.
- Defined and tracked key business metrics — including conversion rates, churn indicators, and repeat booking rates — translating analytical outputs into clear, executive-ready recommendations.
- Collaborated with cross-functional teams (marketing, operations, and product) to scope data-driven initiatives, resulting in a 30% uplift in customer engagement within a single quarter.

Data Analyst (Academic Placement) | Library Research Team | Charles Darwin University | Sep'24 – Feb'25

- Conducted comprehensive data preprocessing, cleaning, feature engineering, and analysis on library service data to identify usage trends and demand patterns.
- Validated and organised datasets to improve data quality, consistency, and suitability for analysis and reporting.
- Built a linear regression demand-forecasting model in Python (scikit-learn), enabling the library team to predict query volume fluctuations across academic cycles and proactively allocate staffing resources.
- Created dashboards and visual reports in Power BI to communicate trends, insights, and performance patterns to stakeholders.

- Delivered structured presentations and visual summaries that effectively communicated technical findings to non-technical audiences, improving data literacy across the team.

Software QA Engineer (Data & Systems Validation) | PagarBook - Workforce Management Solution | 2021 - 2024

- Validated complex payroll calculation logic and attendance data integrity using advanced SQL queries (joins, subqueries, aggregations) across relational databases, identifying and resolving critical data discrepancies before release.
- Executed system integration testing across web, mobile, and back-end microservices to verify accurate, end-to-end data flow between payroll, attendance, and reporting modules — directly mitigating downstream data quality risks.
- Designed and executed comprehensive API test suites in Postman to validate RESTful endpoint responses, data schemas, and business rule compliance for payroll and attendance processing pipelines.
- Tracked, prioritised, and managed the full defect lifecycle in Atlassian JIRA within Scrum framework, collaborating with development teams to achieve timely resolution and on-schedule product releases.

Security Officer (Casual) | Neptune NT Security

October'23 - Present

- Provide professional, frontline security services across a range of sites and environments in Darwin, consistently upholding site integrity, safety standards, and security protocols.
- Operate and monitor access control systems and CCTV surveillance equipment, maintaining vigilance across all monitored areas and responding promptly to alarms and alerts.
- Respond to emergency situations including fire alarms, medical incidents, and security breaches in accordance with established emergency and alarm response protocols.

Academic Qualifications

Master of Data Science | Charles Darwin University | Darwin, Australia | 2023 – June'2025

BSc in Information and Communication Engineering | East West University | Dhaka, Bangladesh | 2017 - 2021

Professional Qualifications / Specialisations

- Microsoft Power BI Data Analyst | Preparing for PL-300 Certification
- Google Data Analytics | Coursera | 2024

Projects

- Ingested and transformed open-source NT Government datasets; built a multi-page Power BI report with DAX-driven KPIs to surface economic trends, tourism volume patterns, and regional growth indicators for policy-relevant insights.
- Analysed 13 years of US EV market data performed time-series trend analysis, market share segmentation, and adoption-rate modelling, findings through an interactive executive dashboard.

Volunteering and Community Involvement

Volunteering

- Planning and organising local tech meetups and workshops to strengthen the community of **Google Developer Group Darwin**
- Assisted in event coordination, supported registration activities for more than 1000 students in two days **CDU Graduation Ceremony** event.

Participant | GovHack | 2025

- Collaborated with team to develop innovative solutions using open government data in time-constrained hackathon environment.
- Applied data analysis, problem-solving, and creative thinking skills to design a functional concept addressing real-world challenges.
